

PRO FRAME VELVET SERIES

The **Pro Frame Velvet** is a fixed frame projection screen with a pro trim velvet coating. Its frame is composed of a light weight anodized aluminum and uses our CineWhite® (matte white) front projection material. The 2.4 inch thick framework has a split-frame 6 piece design that greatly reduces shipping costs while making it easier to navigate the tight confines encountered in most job sites. The CineWhite® has broad light dispersion through diffusion uniformity, black & white contrast and true color rendition making it the most versatile in Elite ProAV screen product lines.

Screen Material

- CineWhite® (matte white) tensioned front projection material with 1.1 Gain
- Wide 180° viewing angle uniformly reflects a bright image across entire surface for superior off-axis performance and versatility
- Black backing on material eliminates light penetration for a sharper picture and clarity
- 4K/8K Ultra HD compatible
- Available in diagonal sizes
 - 100" through 200" in 16:9 aspect ratio
 - 114", 125" and 144" in 16:10 aspect ratio

Design & Installation

- Permanently tensioned fixed frame projection screen
- 2.4" width frame with velvet coating
- 6-piece aluminum "split-frame" design reduces shipping costs and enhances job-site accessibility
- Push-clip design fastens material to the frame for full tension uniformity
- Installation kit includes: Woods screws & anchors, Wall Brackets, Screwdriver, Mallet
- 5-year manufacturer's warranty
