

Dear Attendee

Thank you for visiting us at Infocomm India 2019 in Mumbai (Stall G08). The show served as a great opportunity to demonstrate our lineup of ambient light rejecting screens. Each of the ambient light rejecting materials qualify for the designation of “CLR®” for their ability to mitigate the washout effects from overhead “ceiling” light sources. Commercial and residential spaces cannot go dark so Elite Screens India Pvt Ltd. provided screens that delivered perfect picture quality regardless if the lights are on or off. Each of the featured screens were matched with an Epson projector.

- **Aeon CLR®** - Fixed frame "EdgeFree®" CLR screen for UST projectors
- **Saker Tab-Tension CineGrey 5D®** - Tab-tensioned electric ALR/CLR® screen for optimal bright room performance
- **CineTension 2** – Electric tab-tensioned electric projection screen using a matte white material with wide diffusion uniformity

This year, we replicated both a board room and a home theater environment. The results were superb and we spoke with a lot of knowledgeable AV specialists who were pleased to see the solutions we offer.

Special thanks go out to all our Dealers, resellers, and individual buyers. Our team worked hard for a successful show and your attendance made that possible. Our team wishes you the very best and hope you had a safe, pleasant trip home from the show. I look forward to meeting with you to follow up on our discussion.

Warm regards.

Sincerely

The Elite Screens India Team
